**Notes:**

<sup>(1)</sup> Information on configuration is provided by the equipment manufacturer as part of the testing process.

<sup>(2)</sup> The Concept of Operations (CONOPS) applied for EDSCB equipment depends on the EDSCB Standard achieved:

**Standard C1:** Screening requires the divestment of electronics and liquids, aerosols and gels (LAGs).

**Standard C2:** Allows screening of baggage containing portable computers and other large electrical items.

**Standard C3:** Allows screening of baggage containing portable computers and other large electrical items and LAGs.

**\*Equipment that received the initial notification before 1 August 2024 may only be used to screen LAGs with a screening limit of the maximum volume of individual LAG containers not to exceed 100 ml.**

Disclaimer: Listed EDSCB configurations had not been tested for hold baggage performance under the CEP

<sup>(3)</sup> The evaluation is based on External Testing Methodology/Test results. Test reports endorsed according to the Exceptional Procedure for CEP Recognition of External Testing Methodology and Test Results for EDSCB C3 (Higher Volumes).

<sup>(CC)</sup> A configuration change has been endorsed by the CEP Management Group as not affecting detection performance.

<sup>(CC-TE)</sup> Additional trays have been added to an approved configuration following a Tray Equivalency (TE) assessment conducted according to the TE/CCM procedure using the X-ray Configuration Change Test Set (XCCTS).

<sup>(CE)</sup> The entry has been modified by the Secretariat generally to amend typos and errors in the designation of configuration details (e.g. designation of trays), previous endorsement by the CEP-MG.

Any changes compared to the previous version are displayed in blue colour, including new grouping of configurations corresponding to the same test reference and date of communication.
