Type of equipment

☐ **Explosive detection system (EDS) for hold baggage**	☐ **EDS Standard 3.1**, includes testing against Standard 3.0 ☐ **EDS Standard 3.2,** includes testing against Standard 3.1
☐ **Explosive detection system for cabin baggage (EDSCB)**	☐ **EDSCB Standard C1**, LAGs and large electronic items (e.g. laptops) divested. ☐ **EDSCB Standard C2**, large electronic items remain inside baggage but LAGs divested. ☐ **EDSCB Standard C3**, large electronic items and LAGs remain inside the baggage.
☐ **Automated prohibited item detection (APID) software**	☐ **APID Standard 1**, using CONOPS C1. ☐ **APID Standard 1**, using CONOPS C2. ☐ **APID Standard 1**, using CONOPS C3.
☐ **Liquid explosive detection system (LEDS)**	☐ **Type A**, screens LAGs held in open containers by sampling a small volume of the LAG. ☐ **Type B**, screens LAGs held in individual closed and/or sealed containers (one by one). ☐ **Type C**, capable of screening simultaneously multiple closed/sealed containers containing LAGs.
☐ **Security scanner (SSc)**	☐ **Type A**, Security Scanners with automatic threat detection and indication of the location of potential threats on an avatar
☐ **Explosive trace detection (ETD) equipment**	☐ **ETD Standard for detection of explosives**. ☐ **ETD Standard for the detection of chemicals**. ☐ **Threat identification** ☐ **Hand CONOPS** ☐ **Both** ☐ **Radioactive source** ☐ **Wand CONOPS** ☐ **Reduced scope FT** for the approval of new wand only in combination with a previously approved configuration of hardware and software with a different wand.
☐ **Explosive vapour detection (EVD) equipment**	☐ **EVD Standard 1** for cargo, mail, airport & in-flight supplies, and air carrier mail & materials
☐ **Metal detection equipment (MDE)** for cargo and mail.	
☐ **Walk-through metal detector (WTMD) equipment**	☐ **WTMD Standard 1.1,** on request only ☐ **WTMD Standard 2.1** ☐ **Use in combination with SMD**

Type of request

☐ **Full Test (FT)**, a fully functional equipment configuration is tested using sets of objects and persons as appropriate, following a Concept of Operations (CONOPS) provided by the manufacturer.

☐ **Simulator Re-Test (SRT)**, for modifications made to the detection software only.

Corresponding Full Test reference (Only for SRTs):

☐ **Configuration Change Management (CCM)** for modifications to potentially critical elements that the manufacturer believes do not affect the detection capabilities of the system.

Relevant test references for CCM:

Timeframe, in which year/quarter the equipment will be available for testing

☐ **Q1** ☐ **Q2** ☐ **Q3** ☐ **Q4** **Year:** **Month** (optional):

Equipment configurations submitted

Model (type designation of the equipment):

Detection Hardware versions (all):

Detection Software versions (all):

CONOPS (all):

Auxiliary Hardware, when applicable to EDS, EDSCB, APID, ETD, LEDS, including but not limited to trays, wands, swabs, etc.:

System software, when applicable to ETD, APID, LEDS and SSC:

Auxiliary software, when applicable to EDS, EDSCB, APID and MDE:

Other relevant information:
